

Tank upgrade kits for odorless sewage treatment plants

A set that allows you to upgrade a sealed, drainage tank or sedimentation tank of a drainage treatment plant into an odorless biological sewage treatment plant BIO EASY FLOW.

The modernization kit consists, depending on the model, of such elements as: a blower, a diffuser, a distributor, a system for collecting treated sewage, a pump, a float and a technical box with a controller.

Series

Index	Set model	Kit composition		
A/0226	Retrofit 1-6 dedicated to settlers with a capacity of max. 3500 l)			
A/0246	Retrofit 1-8 dedicated to settlers with a capacity of max. 4500 l	1 x blower* 1 x diffuser 1 x pump with float	- round technical box Ø400 - controller MultiBio 2000 - gasket set	Elements for fixing the pump in the tank, sampling installation
A/0247	Retrofit 2-10 dedicated to settlers with a capacity of max. 6000 l			
A/0248	Retrofit S 1-8 dedicated to septic tanks with a capacity of 3500 l – 10000 l	1 x blower* 2 x diffuser 1 x pump with float	- round technical box Ø400 - controller MultiBio 2000 - gasket set	Elements for fixing the pump in the tank, sampling installation
A/0227	Retrofit S 2-10 dedicated to septic tanks with a capacity of 6000 l – 12000 l	1 x air distributor		
A/0249	Retrofit 2S 2-10 for two and three - chamber septic tanks with a capacity of 10000l - 12000l	2 x blower* 3 x diffuser 1 x pump with float** 1 x air distributor	- round technical box Ø600 - controller MultiBio 3100 - gasket set	Elements for fixing the pump in the tank, sampling installation

* The size of the blowers is adjusted depending on the Retrofit model

** For the A/0249 Retrofit 2S 2-10 model, as an additional option, it is possible to equip the set with a mechanical recirculation pump for excess sludge
